MMLU: selection stability (10 subsamples of 80% of the training models)
Jaccard (solid: alternatives pairwise; dotted: full selections across splits)
Selected benchmarks k
R^2 (filled: full; open: alternatives ± sd)
Selected benchmarks k
R^2(full) − R^2(alternative)
Benchmarks replaced (of k = 5)
Population R^2 of alternatives / full (dotted: min)
Selected benchmarks k
Mutual Info (Alg. 2)
Greedy trace min.
Entropy (Alg. 1)
Hub correlation
PCA subset (CSSP)
Facility location
Random subsets
alternatives
random swaps of A_k (matched)
faded: no significant gap to random
